Abstract: The dynamics of the rural population of the Republic of Belarus caused by the natural decline and migration processes has been analyzed; the age and educational composition of human capital has been studied. The necessity of professional development of agricultural workers is substantiated and the priority areas of additional education are identified. The role of digitalization in the development of agriculture is analyzed and the demand for specialists with digital competencies in the labor market is shown. Measures have been identified to improve the digital literacy of industry workers. Key areas of activity aimed at increasing the level of use of human capital in the context of the development of digitalization of the agro-industrial complex of the Republic of Belarus have been proposed.
