Keywords: criterion; organized crime; crime; risk; fisheries complex; factors; environmental security; economic security; economic crime.

Abstract: The article assesses the indicators of the fisheries complex over a number of years for an analytical review of its economic and environmental security. The article presents the results of a study of the dynamics of economic crime in the implementation of fisheries activities. The factors activating business crime have been identified, which negatively affects both the economic security and the environmental component of the fisheries industry security. Based on statistical material, the hypothesis has been confirmed that economic crime has actively penetrated all areas of activity, which has become a real threat to the economy of the fisheries industry. Ways to reduce economic crime in order to level the negative impact on the economic and environmental security of the fisheries industry have been proposed.
