

Matters Concerned with Informatization of Tambov State Technical University

V.E. Podolsky

Tambov State Technical University

Key words and phrases: Internet; informatization; education; resources; technologies.

Abstract: Informatization of the university takes place in two interdependent layers. The first layer contains matters of general infrastructural informatization. The second layer covers applied matters of informatization in the directions supported by scientific schools of the university as well as in the educational directions of departments and faculties. The main tasks are: 1) formation of strategic and tactical solutions aimed at informational joining of the world educational continuum and maintenance of continuous access to it on the level sufficient for development of educational process, scientific and organizational activities; 2) organization of gradual transformation of TSTU into informatization center of Tambov region aimed at training of competitive highly-qualified specialists, who have good knowledge of information technologies.
