Key words and phrases: norms; principles; correction; stylistics; text.

Abstract: The problem of scientific texts correction is considered from the point of functional style norms. Within the suggested framework of scientific text correction we distinguish between four principles: epistemological, holografical, analytical-synthesizing, and technological. These principles combine the extra-linguistic basis of the scientific style, the epistemic content of a scientific text, the holografical principle of the text semantic structure organization and peculiarities of corrective reading.
