Key words and phrases: agrotechnopark; biome; research zone; I.V. Michurin's nursery.

Abstract: Matters of forming the composition and architectural concept of agrarian technopark in Michurinsk, the necessity of which is conditioned by giving the town the status of “scientific town” are studied. Foreign analogs linked to this topic are analyzed; main constituents of the complexes as well as peculiarities of their design are identified. The possibility of using Michurin's nursery which is the national monument of the town as historical prototype is discussed. One of the form-building factors is the specificity of the territory given for the object construction.
