Key words and phrases: investment attractiveness of the region; development of investment potential; total investments in main assets; volume of investments in main assets per capita; ranging of regions in central Russia.

Abstract: The problem of regions' investment attractiveness is considered. The research into dynamics of total investments into main assets in Russia from 2000 till 2007 is carried out. The central Russia regions are ranged from the point of their investment attractiveness. The results of the research enable to draw the following conclusion: the central Russia regions differ greatly in the amount of investments into main assets per capita.
