Key words and phrases: types of landscapes; genesis of culture; landscape; the principle of evolutionary genesis of culture; evolutionary approach to landscape study.

Abstract: The paper studies the landscape as a generic notion, which has witnessed the evolution of the cultural landscape in the process of culture genesis. This landscape is understood as a modern correlative system of natural and social elements coexisting and interacting in space and culture genesis as a historical and cultural process, spelling out the development and improvement of regional and global spaces of «geoversum» (geographical history of the mankind) and the formation of modern civilization.
