

Problem-Solving of Searching Graph Connected Components via Symbol Mathematics System

V.V. Vasilyev, V.G. Tikhomirov

Tambov State Technical University, Tambov

Key words and phrases: graph theory; orgraph; transitive closures; connected component; incident matrix; teaching materials; didactic units.

Abstract: The paper studies the number of tasks of graph theory required in various applications; the need for selection of the above-mentioned didactic units is grounded; the algorithm of finding the graph connected components is presented; the possibility of control over intermediate results of calculations exists.
