

New Approach to Research into Decrease and Increase Functions

A.D. Novikov

Armavir State Teachers' Training Institute, Armavir

Key words and phrase: function increase; function investigation; Math's teaching technique; function decrease.

Abstract: The paper draws the conclusion on the controversy of the approach to the research into increase and decrease functions. The alternative approach is proposed; it's the author's new concept which provides instruments and scheme of research into decrease and increase functions meeting the requirements of lack of controversy and theory completeness. The new approach can be applied in university courses of Mathematical Analysis and Higher Mathematics as well as school course of Mathematics.
