Key words and phrases: quality of medical services; distant consulting system; distant information support system; IT-technology.

Abstract: The paper proposes the technique for solution to the problem of present-day medical service, which is caused by development of international distribution system of distant consulting for doctors and dermatologists working in remote areas of Russia (Biysk, Altai region). The system is based on the principle of exchange of analytical packages containing the necessary information for making decisions on particular patient's treatment.
