The Analysis of Professional and Personal Development of Future IT-Specialists on the Basis of Scenario Approach

L.N. Plotkina

Kuznetsk Institute of Information and Management Technologies (Subsidiary of Penza State University), Kuznetsk

Key words and phrases: educational environment of the university; information technology; professional and personal formation; scenario analysis.

Abstract: The article reveals the essence of the scenario (modeling) approach to the analysis of the professional and personal formation of future IT specialists. The author's experience of applying a scenario approach to the analysis of the study of empirical data is substantiated; it is also noted that the scenario of professional personal formation cannot be used outside specific spatial-temporal framework.
