Key words and phrases: e-learning materials; information competence of the lecturer; interactive educational technology.

Abstract: The paper presents the content and methodology of development of information competence of university lecturers through the organization of training courses based on the integration of methodical training to the use of ICT in the educational process with the preparation of interactive educational technologies (technologies like “Development of critical thinking through reading and writing”, project method, etc.). We describe didactic features of electronic teaching resources which are developed by the students as a course project, which is a final assessment task in the further training courses.
