

Algorithm with the Variable Time Discretization Interval in the Study of Economic Dynamics of Capital Allocation

A.P. Gladkikh

Tambov State Technical University

Key words and phrases: capital management; economic dynamics; management strategy; variable sampling interval.

Abstract: The article proposes a modification of the discretization algorithm of the economic processes dynamics. Thus, the number of analyzed points is reduced; informative points on the analyzed trajectories are used. It contributes to the increase in the speed and efficiency of the optimization study.
