**Key words and phrases:** concept; forecasting; integral indices; mathematical model of quality of life; monitoring; policy measures to improve the quality of life; the quality of life; vertical management system.

**Abstract:** The paper proposes the concept of information-analytical support of state regulation of the quality of life in the region; on the basis of monitoring it enables to evaluate the current problems and reveal new ones regarding the support of the quality of life. Application of mathematical model allows tracking the dynamics of indicators reflecting the quality of life in the region over the previous periods, and obtaining forecasts for future periods.
