Text Classifier Training Parallel Algorithm
for Multiprocessor System with Hierarchical Architecture

Key words and phrases: automatic text categorization; multiprocessor systems; parallel algorithms; support vector machines; SVM; systems with hierarchical architecture.

Abstract: The paper describes parallel realization of text classifier training algorithm, using support vector machines. Load balancing methods between nodes of multiprocessor hierarchical system are suggested. The results of experiments based on collection Reuters-21578 proving the effectiveness of the introduced parallel algorithm are given.
