Abstract: The analysis of changes taking place in the system of postgraduate professional education is presented in the context of assurance of noosphere safety and sustainable development. The interrelation between the content and research components of highly qualified academic staff training and the problems of noosphere safety and sustainable development is considered. The results of monitoring of basic indicators of postgraduate courses performance at technical university are given. The mechanisms to manage sustainable training development of academic and teaching staff in priority areas of modernization and technological development of Russian economy are considered.
