Key words and phrases: adaptive program; credit expert in training; educational concepts; educational software; interactivity; tools.

Abstract: The paper explores the problems of software development recommended for distance learning at universities and municipal educational institutions. The training program has been developed as a data plan that enables to repeat research and educational activities in various subjects in real-time communication of the teacher (instructor) and students (learners) separated by space and time in distance learning; it activates educational activities and strengthens the control of learning activities of students (learners).
