Key words and phrases: master-plan; sustainable development; urban community.

Abstract: The experience of implementing the strategy of sustainable development of territories is considered by the example of the new districts in Horsens (Denmark) and Enschede (Netherlands). The data are obtained with the participation in the international project “Neptune”. The aim of the project is sharing experience and collaboration of experts from different countries and professions in solving global problems.

The basic aspects of the strategy, including socio-economic and environmental sustainability are shown. Their content and tactical courses are revealed. The tasks to be solved by the master-plan and the role of the public and municipalities in creating the preconditions for sustainable development of territories are stated.
