Keywords and phrases: bard song; image representation; localizer; poetic text; songwriter; time representation; verbal text.

Abstract: A bard song is a special type of text and represents a synthesis of three texts: verbal, musical and intonation. A verbal text of a bard song can be referred to a poetic text. Space relations in these texts are expressed through a variety of adverbs and nouns denoting time. All this makes it possible to convey the inner world of a lyrical hero, his feelings and mood to the listener.
