Keywords: human potential; group; team; teambuilding; team roles; social potential.

Abstract: The paper presents a detailed description of the study in the Tambov branch of Russian Academy of National Economy and Public Administration under the RF President conducted among full-time students to identify their psychotypes using M. Belbin's method. We considered the team-building activity "Tower of Babel". We studied the features of team work and distribution of roles between the team members in the following areas: the principle of division into subgroups, manifestations of leadership, conflict in the group, roles distribution, and achievement of results.
