Keywords: information and communication technologies; professional competence; professionally oriented teaching,

Abstract: English language learning is an integral part and a key component of professional training of students at technical universities. The problems of teaching English for vocational and professional purposes are increasingly becoming of high priority in the context of implementation of the new generation of Federal State Standards for Higher Professional Education. The authors analyze the goals and methods of teaching English for specific purposes at technical universities. Much attention is paid to applying Information and Communication Technologies in English classes. Some methods and techniques of teaching ESP students majoring in electronic engineering are described. The examples of using these teaching methods at English Language classes in Bauman Moscow State Technical University are considered. The proposals on improving ESP practices are made on the basis of the gained experience.
