Keyword: sustainable development; mineral resources; common minerals; deposit; mining; subsoil geo-information system (GIS).

Abstract: The paper presents data on the mineral resource base of the Tambov region; the reserves of mineral resources have been identified. The scope of production by type of minerals from the perspective of the socio-economic development of the region has been analyzed. The possibility of providing informational and analytical support to the process of management decision-making in subsoil management on the basis of geo-information systems has been discussed.
