Keywords: development of small rivers; environmental research of aquatic ecosystems; landscapes; park and recreational area; recreational areas; riverbank protection structures.

Abstract: We have examined the ecological status of the river Zhigalka, identified violations of the ecological balance of the system and proposed to consolidate the results of rehabilitation. We considered the options for re-development of the areas adjacent to the river and the Achlebinovskaya Roscha Park for public recreational purposes. The best option for the riverbank protection is the creation of a recreational zone “Achlebinovskaya Roscha” after cleaning works of the neighboring territory are completed.
