Moscow, Russia*

**Keywords:** standardization; standardization objects; information paradigm of standardization; digital economy.

**Abstract:** In the information paradigm of standardization, the cluster of information processes and the cluster of information systems are updated as standardization objects. At the same time, the digital economy actualizes a triad of information processes, a triad of information technologies and a triad of information systems in the form of oriented graphs on the Joyner's quality "triangle". The systemic phenomenological approach to interpreting the results of analytical philosophy of standardization fully reveals the advantages of using Loterij information, communication and infocommunication systems to solve problems of synthesizing the digital economy of the Russian Federation, in comparison with system quality management.
