Keywords: marker indicators; statistical indicators; stock indices; stock market; securities.

Abstract: It is found that for a deep and comprehensive study of the state of the stock market, it is necessary to apply statistical indicators that allow analyzing the processes of securities turnover and marker indicators by means of which general trends and the vector of its development are evaluated. Their main differences are identified. The author concluded that statistical and marker indicators complement each other and undergo changes in the conditions of virtualization of the economy.
