*Tambov State Technical University, Tambov, Russia*

**Keywords:** machine-building enterprise; sustainable development; economic, social and environmental components of sustainable development.

**Abstract:** Mechanical engineering products, being technological equipment in the processing industries, make it possible to maintain the scientific and technical level of production and ensure the quality of products in these industries. For this, it is necessary to ensure sustainable development, first of all, of the machine-building complex, including technical, innovative, economic, human, financial, and environmental sustainability.
