Keywords: process automation; graphic notation; IDEF0 notation; eEPC notation.

Abstract: The construction of a business process using the two most well-known notations IDEF0 and eEPC is considered. The rules for constructing business models are shown, on the basis of which diagrams of these notations are drawn up. A comparative description of the two diagrams is given. The strengths and weaknesses of the considered methods of presentation are identified. The best ways to use notations have been selected.
