Keywords: future specialist; business game; discussion; interactive teaching methods; case study; competitiveness; educational process.

Abstract: The paper considers one of the main issues of modern pedagogy – the quality of higher education as a key aspect of the development of the education system and increasing the competitiveness of graduates. The successful development of educational material and new experience of educational interaction based on active and interactive teaching methods is considered. The role of the teacher in organizing active learning is shown. The practical significance of using such methods as discussion, business game, case-study (or the method of analyzing specific situations), etc. in the system of higher professional education is analyzed. The main directions of development of modern vocational education and effective means of training qualified specialists are presented.
