Abstract: The issue of improving the efficiency of inventory management in food industry enterprises, specifically at JSC “TAKF”, is considered. Theoretical aspects are studied, an assessment of the current inventory management system at JSC “TAKF” is provided, and recommendations for enhancing the efficiency of material resource management are developed. Problems arising from improper resource allocation and supply disruptions are analyzed. Measures to optimize inventory management using modern information technologies and analytical tools are proposed. The results are aimed at improving the enterprise's competitiveness.
