Keywords: adaptation of flexible management methodologies to startups; flexible project development methodologies; specialized software for startups; startup.

Abstract: Agile management methodologies such as Agile, Scrum, Lean Startup, Kanban, Extreme Programming and Dynamic Systems Development Method are seen as tools to help manage IT startups more successfully. A combined approach to the implementation of flexible project management methodologies and adaptation of flexible management methodologies to startups in the early stages of development is proposed; the main approaches to the development of a task scheduler integrated with social networks have been identified.
